## Warning: stripos() expects parameter

Posted by kehagiem - 2007/09/19 11:38

---

Hello,

Thanks for this nice and handy module.

After installing the module the following error appears:

Warning: stripos() expects parameter 1 to be string, NULL given in D:\inetpub\hostselecric-land.com\httpdocs\includes\compat.php50x.php on line 105

The version of simple eWeather module is v 1.0.5. and Joomla 1.0.12.

What am I doing wrong? Any help?

Regards,  
Emmanouel
