
Module parameters not saved

Posted by markamel - 2008/10/21 21:57

I have the e-weather component installed en configured with key.
The raf module is installed and the patch for the component.

First I got weather data only on the links page, but the module was empty on all other pages.

Did I forget any setting/configuration.

Gr Mark

Hi!

Can you send me a screenshot of the settings page for the module?

Hi!

Sorry for long response.
The parameters are ok.
Can you send me a link to your site?

Skorp

links:

<http://www.thesurinamhighlights.com/> this is home module is empty

http://www.thesurinamhighlights.com/index.php?option=com_weblinks&Itemid=23 this is the links page (component joomla) here the module is filled.

Hi!

Could you try to set the debug level of Joomla higher, so that error/warning messages are displayed?
