## Problem with module

Posted by vic - 2007/11/28 20:02

---

Hello, first thanks for a great modification

I have your weather componet & module installed (latest version) and 3 times reinstalled but i get this error when i click on city - on the page with forecast.

Notice: Undefined variable: sql in

/var/www/test56/htdocs/components/com\_eweather/eweather.main.php on line 262

262 - 263 line is:

```
$database -> setQuery($sql);  
$database -> query();
```

thanks

Hi!

download eWeather patch again or replace this two lines with

```
if (!empty($sql))  
{  
    $database -> setQuery($sql);  
    $database -> query();  
}
```

Skorp
