
RAF Cloud not showing meta keywords in module

Posted by gmalone - 2008/04/21 15:07

Using the latest version of RAF Cloud, w/ J1.5 stable, I'm unable to get anything other than "words" from content articles to show up in the cloud. All I want is the meta keywords to show up, nothing else (frankly I don't see what the practical use of "words" is, anyway).

I've configured and reconfigured and clicked the "rebuild list" option and set an hourly schedule for auto-updates -- no meta keywords are showing up, either in the admin tags list (nothing is showing because I've said 'no' to "words") or in the module on the site.

Any advice? Anyone else having a similar problem simply getting RAF Cloud to work with meta-keywords?

Many thanks.

Hi!

Have you published the Joomla Content Keywords Plugin?

Skorp

Thanks! That did the trick. Also had to "rebuild list" in the Manage Tags view, after publishing the keywords plugin.

A suggestion: perhaps make keywords plugin automatically published, or somehow make it clear to users about this requirement. Maybe you did, and I didn't catch it. Many thanks for your help.

Having a similar problem -- no words are showing in the module. Just the tile.

Can you provide a link to the Joomla Content Keywords Plugin.

Thanks!

Hi everyone,

I have the same problem...with one difference...the plugin is installed and active!

Whenever i rebuild the list i can see only words and words(whitelist).

I attach a pic with the module settings <http://www.joomla.royy.net/images/fbfiles/images/module.PNG>

Please help me, i'm just looking for a simple cloud made by native joomla meta tag keywords! ;)

I'm having the same problem as hurrionz. I've published the plug-in, have rebuilt, have words='no' and meta='yes' with a frequency of 1 and still don't get all of the keywords listed. I get a few, but not all.

I'm on Joomla 1.5.15

Is there something else I can try in order to get this to work?

I had the same problem, but I fixed it by following these steps:

0. Make sure you have at least one tag published (Components->Raf Cloud->Manage tags)
1. Make sure you have the content plugins enabled (Go to Components->Raf Cloud->Manage Plugins, enable Joomla Content Plugin, Joomla Content Keywords plugin)
2. Disable the Raf module (through Extensions->Module manager)
3. Reload your site
4. Enable the Raf Module
5. Reload your site again

Worked for me
