## Use of module Raf Cloud with Joomla 1.5

Posted by jmsixt - 2008/07/28 17:40

---

I have problems with module Raf\_Cloud when I try to use it on my site in French with Joomla 1.5.:  
French UTF8 has problem for administration languageTags are incorrect when viewing articles  
I have decided to make the corrections, I hope I do it in the right way !

With Joomla 1.5 urls syntax to view an article has changed.  
This patch can generate correctly tags RafCloud under Joomla 1.5 and for all items, categories and sections.

I also have amended the module for the generation of tags for Docman:  
Used to display a category, it also takes into account all the descriptions of subcategories for the generation of tags,When the category contains no sub-category, it generates tags from the documents contained in the category.

For example, on our site, for the "multimedia", tags are generated from the categories "multimedia", but also multimedia> audio players ", " multimedia> mixing console, "multimedia> CD ripper" ..

For the category "multimedia> audio player", which contains no sub-categories, but only 3 documents, these are the 3 documents used in the generation of tags.

This solution further improves the relevance of tags generated by RafCloud.

Let me know if you are pleased with this update

All files can be downloaded at  
[http://jmsixt.atwebpages.com/index.php?option=com\\_docman&task=cat\\_view&gid=47&Itemid=27](http://jmsixt.atwebpages.com/index.php?option=com_docman&task=cat_view&gid=47&Itemid=27)

Hi!

Thanks for this modification. I will add it to the next version.

Best regards  
Skorp
