---

This is the error message I'm getting after installation Notice: Undefined variable: rules in /home/mysite/public\_html/modules/mod\_raf\_cloud/mod\_raf\_cloud.php on line 56. Could you help me correct this error message?

Hi!

Here is a patch tha should fix it.  
Download

Skorp

Thank you for the download. It did correct the problem but it caused a problem with my site. I have php 5 + I don't know if that makes a difference. Since applying the patch I have had problems with my frontpage loading. The first error was a banner, tab, frontpage slider wouldn't appear. Then when loggin the whole frontpage went white, and nothing would come up. I uninstalled the component, module and plugin and everything is back to normal. I am still interested in using the program if there is a fix for this.

Thanks again,

=====

Hi!

This could be a problem with Linkbot plugin.  
Please try without this plugin loaded.

That did the trick.  
I'm all set. Love it. Thank you!!!
