
module error

Posted by FOZ13 - 2008/10/01 06:49

Current setup is Joomla 1.0.15 and after a fresh install of the 2.0.2 module patch i config'd raf cloud comp and I have the following error appearing:

Warning: mb_strtolower() : Unknown encoding "(null)" in
/home/XXXXXXXX/public_html/home/modules/mod_raf_cloud.php on line 34
Any ideas?

raf_cloud Debug shows no issues
