
capital letters in cloud

Posted by lemur - 2008/11/17 12:03

Hi,

for german language i need capital letters in cloud.

How is it possible to have it?

And at the same time special characters (Lower-case function)?

Thanks.

Hi!

Did you try the "String" parameter in the module?

Skorp

"String" parameter in the module is set to "original" by me.

but all words in the cloud are "lowercase".

What must I use to have words like "Article" and not "article"?

Thanks.

I'd like to know this too if possible, settings the same 'original' and all are lowercase.

I'm wondering if it simply a case of the module picking up certain words that happen to be at the beginning of a sentence?

Thanks :0)

hey there, know this is a couple of days old; but same problem here with the latest version (3.0beta8), everything in lower case letters. Are there any news I have overlooked, does a solutions to fix this exist?

Tia

still the same in 3.0beta9 (component) & 3.0beta6 (module), I noticed that the lowercase appearance starts in the component-backend, so it's not the module. I searched all the related files but didn't find a string to change.

Hi!

Did you try setting "Lower-case function" to -----?

Skorp <http://www.joomla.royy.net/images/fbfiles/images/settings.jpg>

Thanks skorp, that fixed it, :) I didn't try that particular setting or didn't rebuild the list or whatever...
Little Hint: I had to delete all database entries (in --> configuration), then uninstall and reinstall the component, to have all words displayed in the right way, only changing the setting and rebuild the list wasn't enough; took me 3 minutes and now it's running fine...
