## Raf Cloud + SH404SEF

Posted by bensoltane - 2009/02/03 07:12

---

Hi,

I'M USING :

- Joomla 1.5.9
- Raf Cloud 2.0.2
- SH404SEF 1.0.16\_Beta - build\_222

MY SEF CONFIGURATION :

- > in SH404SEF
  - com\_rafccloud : use default handler
  - com\_search : skip
- > in Raf Cloud component
  - sh404sef prefix: "recherche" (i'm french)
- > in Raf Cloud module
  - SEF Urls : internal link
- > in .htaccess
  - line added : "RewriteRule ^searchword/(.\*)/ index.php?searchword=\$1&option=com\_search "

Everything is ok for me in frontend panel, URLs generated are :

- > /recherche/.html

MY QUESTION :

is it possible to replace numerical ID for a keyword ID ?

For example : [www.mywebsite.com/recherche/99.html](http://www.mywebsite.com/recherche/99.html) will be [www.mywebsite.com/recherche/my\\_desired\\_keyword.html](http://www.mywebsite.com/recherche/my_desired_keyword.html) ?

Thanks in advance.

Hi!

This is a modified versions of a sh404sef plugin.

Skorp [https://www.joomla.royy.net/images/fbfiles/files/RafCloud\\_sh404sef\\_plugin\\_2.zip](https://www.joomla.royy.net/images/fbfiles/files/RafCloud_sh404sef_plugin_2.zip)

---

Hi !

Thanks for this upgrade !

What's new in this plugin ? Is the modification of URL's with keywords present ?

---

EDIT : VERY VERY GOOD !  
It's okay now, new urls are :  
www.mydomain.com//.html !

MANY THANKS !

Also for me there was this problem,

I solved with the new release posted by skorp and commenting just two lines:

```
//$title = $RC_value;
```

```
//$title = $sid;
```

Now the urls will be more friendly :-)

Enjoy

Hey guys.

I'm using Joomla! 1.0.15 and I have the same problem.

I've tried the skorp update but still doesn't work.  
Also tried the khaos hint but then, the links will all point to the site index.

If I can't get this to work, the urls won't be friendly and the advantages are none.  
Is it because I'm not using joomla 1.5? Can anyone help me please?  
Thank you

Hello guys.

Just solved my case.

After wondering around the code, asking myself why does it work for others, and after doing a few tests, I found it. On the new skorp version, the new feature will work in some servers and not in some others. There are IF cases placed there, to make it work in every case, but something was missed. It's that a certain variable may need re-initiallization, depending on the server.

So, after the line:

```
$title = $sid;
```

I added the line:

```
$result=null;
```

Now works great.

About the hint told by khaoss, that is only for modifying the sef link as your preference. On my case I only commented the second line. You may want to experiment with it.

Anyway, if you are experimenting, don't forget to purge the SH404SEF links each time you change the code.
