
link tag cloud to sobi2 directory list page

Posted by jon73 - 2009/03/11 09:52

Hi

I have set up RAF tag cloud component and the module. Problem is the module/component is picking the sobi listings tags out and using them in the cloud but when you click a tag (taken from a sobi2 list). you are taken to the Joomla 1.5 search component and not the directory listing page.

I have read that it involves changing the core code within the RAF cloud module, but not sure what to change or how to change it.

Help please ASAP!

I am using Sobi2 with Joomla 1.5. I have not set up any SEF or SEO functions yet...I am sure more questions will follow soon.

Thanks

Hi!

You can use custom search link, set Raf Cloud Module->Search link:

`index.php?option=com_sobi2&sobi2Task=search&sobi2Search=%1`

Skorp
