
Problems after updating

Posted by ghosty - 2007/12/04 12:34

Hi,

since I have update the Component files to 1.0.1beta1 I have figured out that there will no new words added to the word list?

Did I miss something in the Configuration or does the rebuild list function not work any more?

Cheers

Pete

Hi Skorp,

I'm sorry forgotten to mention this, Sytsem is Joomla! 1.0.12 Charset iso-8859-1

And German / English with JoomFish 1.7.

Cheers

Hi!

Backup your database first :) and follow these steps;

1. In "Cleaning" run "Remove unpublished"
2. Open "Plugins" and make sure at least one plugin is published.
3. Select "Rebuild list" then check for new words.

Hi,

Done step by step no change ...

What happens when I un install it ? does the whole DB entrys getting lost?

Cheers

Pete

Hi!

Yes, but you can do this:

Find rafcloud.xml in direcotry /administrator/components/com_rafcloud/ ,
edit this file and remove lines:

```
DROP TABLE `#__rafcloud_stat`  
DROP TABLE `#__rafcloud_plugins`
```

Backup file settings.php and now you can unistall this component.
Install the new version then replace settings.php with backup file.

Hi Skorp,

I'll give this a try and report back as soon as done :)
Thanks for your help

Cheers

Hi Skorp,

ok I tried all this no change, word list still does not get updated...

What else ?

Cheers

Pete
