## Help installing

Posted by OS1 - 2010/03/02 18:38

---

Please, please, please can someone help me install Raf Cloud?! I have downloaded bot\_rafcloud\_links\_3.0\_beta\_1.zip, mod\_raf\_cloud\_3.0\_beta\_7.zip and com\_raf\_cloud\_3.0\_beta\_9.zip; what do I do next?!

The "Quick Start" guide simply says "Download and install the latest version of RafCloud." - how?!

I've tried unpacking the zip files and copying the contents to the Joomla installation but no luck apart from the Module which does appear in the Modules list.

If I use the upload file from Extensions --> Install/Uninstall I get a message back from the server saying it couldn't create the directory.

If I point the upload page at the directories out of the zip files it says "Please enter a package directory".

If I attempt to use the install.rafcloud.php file I get "Direct Access to this location is not allowed."

Please help me to get this up and running :-)

Thanks,  
Owen

Still an issue? Perhaps permission problems within your Joomla installation.  
Just post if you still see this issue!
