
No tag rebuild

Posted by baolos - 2010/03/11 17:28

Hello,

I've installed Raf Cloud component and module. In the section "Manage Tags" of the component, when I'm asking to generate tags (List rebuild - Reconstuire liste, in French) I'm getting this error :Fatal error: Call to undefined function: iconv() in /homez.133/volontar/www/administrator/components/com_rafcloud/includes/tag.creator.class.php on line 476So, I can't get any tag on my website. :blush: Could anyone help me correct this problem?

Thanks

=====

Looks like you need the php iconv module.

1. If this is your local (linux) host then you can perhaps install it from the package system.
 2. If its xampp just have a look in their forum how to install it.
 3. If its your provider just ask them for setup of this.
