## Fatal Error: Allowed memory size of 33554432 bytes exhausted...

Posted by goc - 2007/12/17 00:17

---

Hi there,

i installed raf cloud local and everything works fine.

But after installing online (no errors) i went to configuration in Backend and did some settings and hit the "save-button" the following error occurs:

Fatal error: Allowed memory size of 33554432 bytes exhausted (tried to allocate 47 bytes) in /is/htdocs/wp9874521\_ZFROAJVHC9/www/includes/database.php on line 489

Well this is nearly impossible cause i dont have that much content and components that my RAM of 33MB should be empty!!!

Well i really wanted to use the great raf cloud! Any Ideas how to fix that :(

Kind Regards

goc

PS: Joomla 1.0.13

Hi!

Open debug window - RafCloud->Config->Debug (bootom of page), try a few times.

You should see something like:

Start Raf Cloud debug!

File time is 17-12-2007 13:47

Ok writing /home/skorp/www/podroze/administrator/components/com\_rafcloud/runlog.php !

Generation time : 3.235692 s

Last run : 18-12-2007 15:33

Next run : 19-12-2007 23:10

New words are added to the database.

Stop Raf Cloud debug!

---

Hi skorp,

i did what you told me and that happens:

That is what my browser displayed:

Start Raf Cloud debug!

Creating /is/htdocs/wp1065255\_ZFROAJVHC9/www/administrator/components/com\_rafcloud/runlog.php.

Start Raf Cloud debug!

File time is 18-12-2007 22:48

Ok writing /is/htdocs/wp1065255\_ZFROAJVHC9/www/administrator/components/com\_rafcloud/runlog.php !

---

---

Fatal error: Allowed memory size of 33554432 bytes exhausted (tried to allocate 47 bytes) in /is/htdocs/wp1065255\_ZFROAJVHC9/www/includes/database.php on line 489

Start Raf Cloud debug!  
File time is 18-12-2007 22:51  
Ok writing /is/htdocs/wp1065255\_ZFROAJVHC9/www/administrator/components/com\_rafcloud/runlog.php !

Fatal error: Allowed memory size of 33554432 bytes exhausted (tried to allocate 45 bytes) in /is/htdocs/wp1065255\_ZFROAJVHC9/www/includes/database.php on line 489

Start Raf Cloud debug!  
File time is 18-12-2007 22:52  
Ok writing /is/htdocs/wp1065255\_ZFROAJVHC9/www/administrator/components/com\_rafcloud/runlog.php !

Fatal error: Allowed memory size of 33554432 bytes exhausted (tried to allocate 45 bytes) in /is/htdocs/wp1065255\_ZFROAJVHC9/www/includes/database.php on line 489

Inside the runlog.php stands:

And several times there comes:

Start Raf Cloud debug!  
File time is 18-12-2007 22:59  
Wait 10s and refresh this page for debug report.

Well after refresh i can download index2.php. But this file is completely empty. (I did that 4 times - always empty)....

:( ?

Kind Regards  
goc

Me again,

i figured out that the sobi2-plugin creates the error. If i deactivate it in the plugin-manager the cloud works like a charm! If i publish it the Fatal-Error: Allowed memory size of 33554432 bytes exhausted (tried to allocate 47 bytes) in /is/htdocs/wp9874521\_ZFROAJVHC9/www/includes/database.php on line 489

occurs. Please help cause this sobi2 plugin is the Main-Reason for what i want to use your cool component. :)

Thanks in Advance  
goc

Hi!

Install the new version of this plugin from  
[http://www.joomla.royy.net/component?option=com\\_docman/task,doc\\_details/gid,12/Itemid,11/](http://www.joomla.royy.net/component?option=com_docman/task,doc_details/gid,12/Itemid,11/)

---

Best regards,  
Skorp

Hi skorp,

thanks for the new version, but i cant install via pluginin-manager. Same error code as mentionbed above. So i load up manually via joomlaXplorer. Plugin is in plugin-directory but is not shown in the rafcloud-plugin-manager :(

How can i activate it manually?

Thanks so much for your help ;)

Best Regards

goc

Hi!

did you unpack this plugin? :)  
You may have to upload .php file.

How big is your database?

Best regards,

Skorp

---

Hi,

yes of course i unzipped :) The rc\_joomla\_sobi2\_plugin.php resides in the raf-cloud plugin directory where all the other plugins are (fireboard, smf.....)

My sobi2 directory is quite big ::) around 9000 entries.

Kind Regards

goc

Hi!

Your directory is quite big and this version of component loads all data into one string.  
I'm going to decrease memory usage in the new version.  
You may have to increase your memory limit :(

Best regards,  
Skorp
